

MODULAR GUARD

The Modular Guarding System is designed to help reduce the risk of flying debris and helps to protect your customer's property from damage.

STEIN MODULAR GUARDING SYSTEM MKII

Insist on the Tried & Tested Modular Guarding System
can you really afford not to guard yourself?

- Each system consists of 3 connecting panels
- Panel dimension 113cm high by 103cm wide (system width 307cm)
- Panel weight 3.6kg (system weight 11kg)
- Each frame is covered in a durable double layered close knit black mesh allowing wind to pass through
- Nylon press stud fittings securing the mesh (1)
- Each Panel is fitted with a reversible Hazard Warning Panel, Plain white on reverse side
- 19mm Tubular steel frame
- The steel frame is fully powder coated
- The panels are connected together by quick release clips which also double as a height variable hinge (2)
- Panels can be carried with ease
- Panels can be added and subtracted to create a custom sized Guarding System
- Large skirt around base to retain debris from going under the system (3)

The Modular Guarding System has many uses.....

- Ideal for use with Stump Grinders
 - Protects cars & windows when using a powered trimmer / brush-cutter
 - Pavement guard when operating Stone Saws
 - Barrier for closing off footpaths
 - Barrier guard for use behind woodchippers
 - Protect cars when using powered weeders
 - Ideal for use with Air-Spades
- Plus many other applications

.....you decide!

DISCLAIMER

We cannot guarantee that this product will stop all flying debris. The manufacturer cannot be held responsible for any damage which may occur when using this product. It is the responsibility of the operator to create a safe working environment and assess the correct use and positioning as part of their Risk Assessment. Further guarding may be required over and above the Modular Guard. Although this is designed as a free standing system securing pins may be required in extreme weather or uneven ground conditions.
