CAUTION

This spare part may be replaced only by a duly qualified person or under the supervision of such duly qualified person. In doing so, be sure to follow these User Instructions!

Such replacement can also be performed by the harness manufacturer for a given fee. If you opt for this possibility, please send your harness to the address indicated above! If you are uncertain as to whether you have the necessary knowledge and experience, please be sure to consult with a duly qualified person or with the harness manufacturer.

For such replacement, it is imperative that you use only a spare part approved by the manufacturer and provided together with this Product Information leaflet. It must only be used for the purpose set forth below. Before using the harness again, be sure to verify that the spare part has been replaced correctly. If you lack the experience, skills, and knowledge that are necessary for this job, please consult with a duly qualified person or with the harness manufacturer.

Edition: 10/2008

Art.no: 6801163

CAUTION

Use of the products can be dangerous. Our products are to be used only for their intended purpose. The customer must ensure that the user is familiar with the proper application and the necessary safety procedures. Be aware that every product can cause harm if it is used improperly or overloaded.

INSTALLATION INSTRUCTIONS

NOTE

We have used a red replacement part in the images below to enhance its' visibility. The equivalent replacement part included in this kit is black.

1. Remove the used connection being careful not to damage any other part of the harness.

2. Thread the replacement webbing part under the red lying ring as shown in the image (the cut end of webbing is facing the harness). Do not pull the stitching beyond the ring.

3. Pass the other end of the webbing part through the loop.

4. Pull the unstitched end of webbing to form a choked bite of webbing around the red lying ring. The cut end of webbing is now facing away from the harness.

5. Thread the end of the webbing through the upper slot of the front hardware. Take care to ensure that the webbing passes from the middle of the harness toward the outer side of the harness.

6. Pass the webbing through loop of elastic material.

INSTALLATION INSTRUCTIONS

7. Ensure that the two adjustable buckle parts are sitting correctly. Pass the webbing through the slot closest to the waist belt.

8. Now pass the webbing over the centre rib of the buckle and thread it through the slot closest to the webbing keeper that holds the two buckle parts together.

9. Check the buckle assembly for correct function before proceeding. If in doubt, check Section J of the treeMOTION User Instructions.

10. Pass the webbing through the loop of elastic material again. Before proceeding, ensure that all parts are in the correct place, are not twisted and that the buckles function correctly.

11. Insert the lower rivet part through the folded up strap and connect it to the upper rivet part to the upper rivet part.

12. Place the strap on a solid surface, and use a hammer to drive the rivet into place.

Repeat the assembly steps shown in pics 1 to 12 for the second Hip/Leg connection.

When using the harness, please be sure to observe the product information regarding our TreeMOTION product. Any and all information concerning transport, storage, and cleaning also apply to the harness with exchanged Hip/Leg connection.

Please keep in mind that the useful life of the harness will depend on the condition of the entire harness. The Hip/Leg connection is only one of the harness components – replacing it will prolong harness life only if all other components of the harness are in a serviceable condition. To evaluate the condition, please observe treeMOTION User Instructions and/or consult a person competent to make such decisions.
